CELEBRATE SAFELY

Phoenix.Gov/fire

Choose a safe location!

Data shows that fire calls where fireworks were a potential fire starter, also were in dry areas or sparks traveled away from the original area and lit grass, brush, debris, buildings.

Illegal fireworks that shoot into the air are typically associated to tree fires, where it then spreads to other trees, properties, and structures.

Dispose of fireworks properly!

When fireworks are for sale, fires often happen from careless discarding of fireworks in dumpsters! When fireworks re-ignite and the dumpster is on fire, it may extend to the garage and residential structure.

When disposing fireworks, always soak for at least 24-hours prior to putting them in the trash can!

Burn Awareness

Often, sparklers are among the most commonly used fireworks. But many people are unaware that sparklers burn at temperatures of about 2,000 degrees Fahrenheit – hot enough to melt some metals.

The sparks can cause burns and eye injuries, and touching a lit sparkler to skin can result in a serious burn.

The Goal of the Arizona Burn Foundation is to improve the quality of life for burn survivors and their families in Arizona, while promoting burn prevention advocacy and education.

Celebrate Safely

Keep spectators at a safe distance! Injuries caused by fireworks are often a result of someone standing too close or being hit with a firework as it went off.

- Never allow children to handle fireworks
- Do not hold fireworks in your hands while lighting them
- Never point or throw fireworks at another person

Take care of your pets!

Always be sure to secure pets! Not only do they get spooked by the fireworks, but it can be common that dogs become defensive and aggressive when fireworks go off.
